

Total Performance

Yamaha Electric Guitars/Basses '88

*It could happen any time, anywhere.
Under the bright lights on the arena
stage, or under the ski poles in some-
one's garage.*

*You're cruising along. Then the music
takes over.*

*Without warning, you're into **Total
Performance.***

*Electric guitars and basses are complex
systems with a simple goal—to put you
in touch with your music.*

*That same goal drives Yamaha
designers and craftsmen to refine wood,
pickups, hardware, every element of the
instrument.*

*Play any Yamaha guitar: Feel the way
each part works with all the rest. The
way all of them work with you—to create
Total Performance.*

RGX Series

Streamlined, aerodynamic, made to come alive in your hands.

The fast 24 $\frac{3}{4}$ " scale and wide 1 $\frac{3}{16}$ " radius fingerboard let you shape notes and chords with a personal touch. The unique height-adjustable locking nut gives you rock-solid tuning and a smooth action.

Play every one of the 24 jumbo frets. There's nothing to hold you back. Deep scalloped cutaways and body-hugging contours let you make the RGX a total extension of your musical impulses.

Climb high, dive deep and come back in tune. This is the ultimate expression of power guitar.

RGX Active

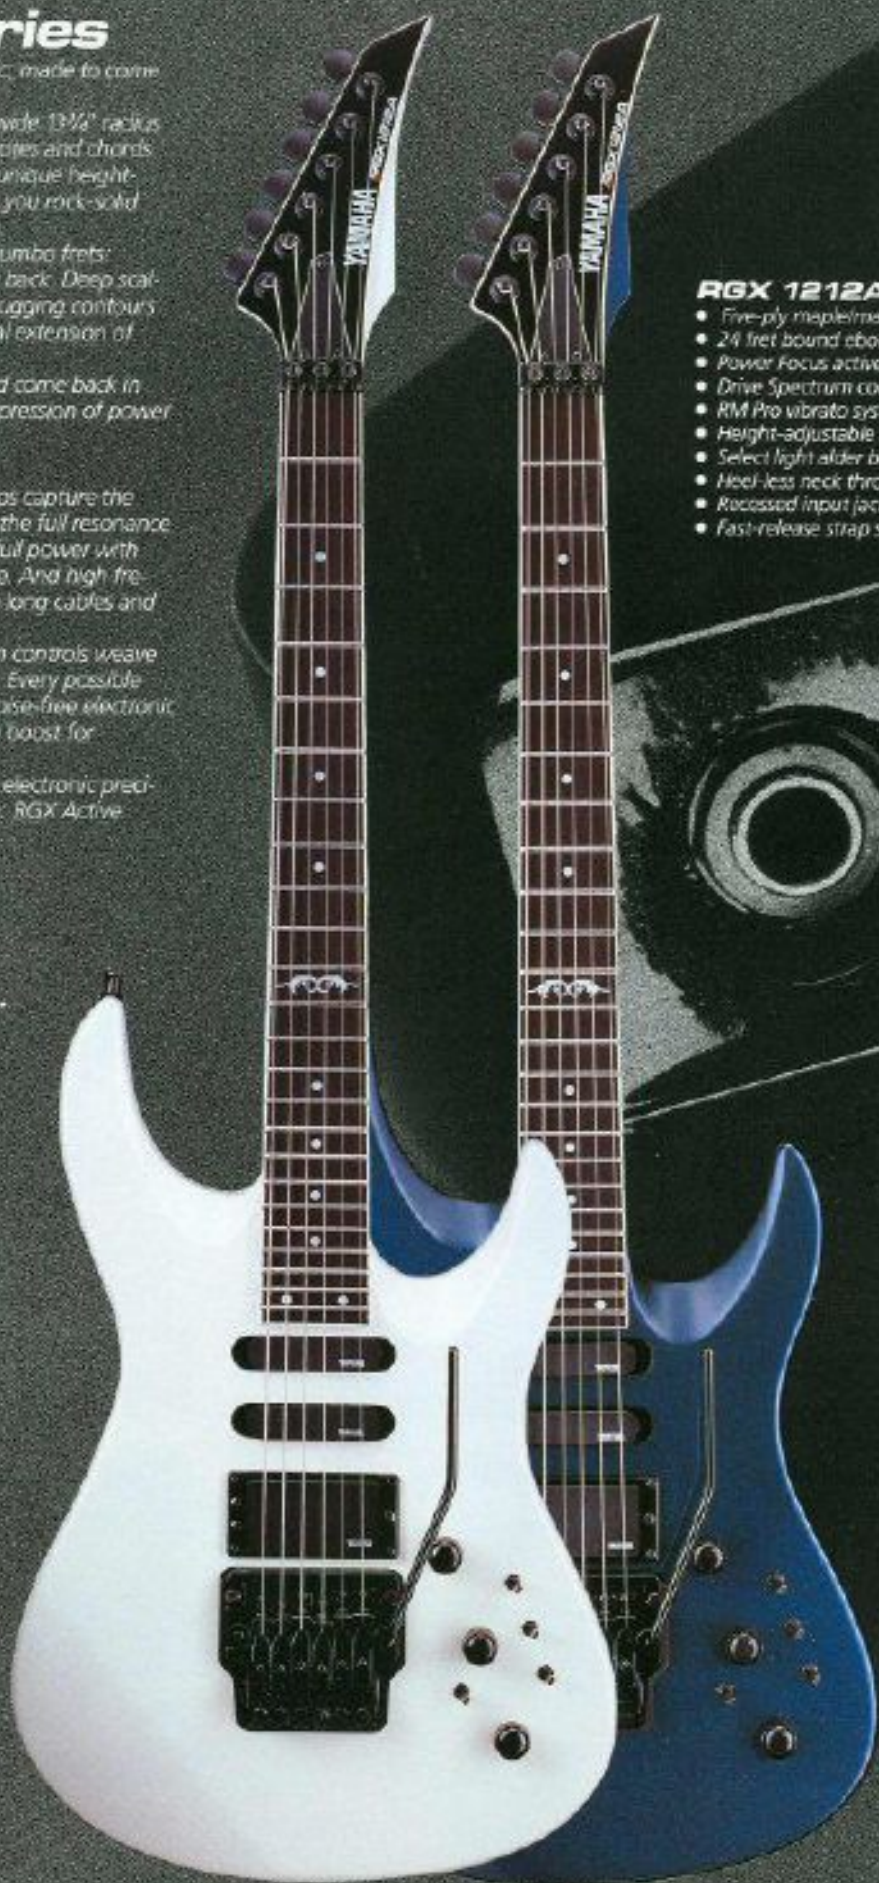

Power Focus active pickups capture the total energy of your attack, the full resonance of the instrument. You get full power with less string pull and low noise. And high frequencies that carry through long cables and effects chains.

Advanced Drive Spectrum controls weave new colors into your sound. Every possible pickup combination, plus noise-free electronic coil-splitting. And midrange boost for warmth and punch.

Raw power focused with electronic precision into lightning response. RGX Active.

SE

SE Series

When the music's for real, your guitar has to respond with a voice as distinctive as your playing.

That's when the details become crucial. The body contours. The clarity, ringing harmonics and accurate intonation of the 25 1/2" scale. The wide radius fingerboard. The versatile pickups and advanced controls. The height-adjustable locking nut. The fine tuning vibrato systems that let you soar through space and land right on pitch.

Go ahead, raise your expectations. The new classics are here.

SE Active

Advanced Yamaha technology takes the time-tested SE design to the limit—and beyond.

Power Focus active pickups bring new guts to humbucking power, without sustain-robbing

string pull. They push single-coil sting and snap through long cables and effects chains with clarity and detail. And without noise.

The Drive Spectrum control system opens new tonal combinations of bite, warmth and drive with mid boost and noise-free electronic coil-splitting.

SE Series guitars are quiet enough for the most critical situations. With reserve energy to push the music to new heights.

SA Series

Responsive elegance, redefined with meticulous craftsmanship.

Semi-hollow beech/birch bodies with dove-tailed mahogany necks impart a rich, full tone to every note. Alder sustain blocks fight feedback at high volume. Traditional humbucking pickups capture all the warmth and presence of your playing.

SA Series: A new expression of tradition that lets you pull out the stops from rock to jazz.

AE1200S

It's the living heart of every guitar and bass—wood that is carefully selected and matched for tonal properties, then shaped and finished to Yamaha standards of quality and precision.

The sum of all our experience in wood and sound is the AE 1200S top, carved from a solid piece of select aged spruce.

The birch back and sides, dove-tailed maple neck and ebony fingerboard draw out its unique voice.

Alnico humbucking pickups radiate lush vintage tone. Coil splitters add new textural possibilities.

Tailor your sound with a warm carved Grenadilla wood bridge or the crisp definition of a gold-plated multi-vector adjustable metal bridge.

This harmonious combination of select materials is our most refined expression of the craft and art of luthiery.

Natural

Antique Sunburst

APX Series

They were contradictory goals: Acoustic warmth and expressiveness, electric power and versatility. Now Yamaha craftsmanship and APX technology bring them together.

The unique APX dual pickup system captures all the detail of the string attack and blends it with the rich resonance of the arched back body.

And spreads it across the soundstage in stereo on many APX guitars. With your choice of two modes. Plus continuous control over the position of each string.

Locking push-button controls keep your sound secure once you've set it. Thinner bodies resist feedback without sacrificing tone. Slim necks are contoured to your hand to make the transition from electric to acoustic effortless. Cutaways give you the freedom to reach for new ideas.

Cross over: Every APX guitar is a bridge from the guitar's roots to its future.

Advanced Form & Function

Function determines form. New ways of playing need new ways of looking at guitar design.

Total concentration. An attitude that makes every detail significant.

That's how we make our instruments respond to your musical impulses with an instinctively natural feel. That's why Yamaha guitars and basses have so many player-preferred features.

The RBX Access Angle neck/body joint uses six bolts for extra stability and sustain.

600 Series guitars have advanced bolt-on necks with Access Angle neck/body joints for unrestricted upper register playing.

1200 Series guitars feature a heel-less neck/body joint for easy upper register playing. Yamaha's locking strap system keeps 1200 Series instruments securely fastened.

Pickups

Tone: Of course it's in the wood. But it's in the metal too.

Small differences in coil windings, magnets and pole pieces make big changes in your sound.

That's why we use advanced computer analysis and careful listening to make our pickups right for the instrument, the music, the player.

Each Yamaha pickup has a unique sound. A combination of Alnico or ceramic magnets, precisely controlled coil windings and carefully selected pole pieces that delivers the right balance of intensity and subtlety. From all-out power to sensitive timbral nuances, Yamaha pickups deliver.

When you want a warm, gutsy tone with plenty of definition and 'cut', Yamaha Alnico V or ceramic pickups deliver it. Three pickup guitars have the middle pickup wired out of phase to cut hum when two pickups are selected. Humbuckers are designed to match the output of single-coil pickups in coil-split mode.

Yamaha Power Focus active pickups have a wider tonal range that carries through long cables and effects chains without losing highs. There's plenty of reserve power for great sustain sounds, with minimal string pull. Advanced design with electronic coil-splitting means both single coil and 'humbucking' Active Series pickups are noise-free.

Yamaha Active Bass pickups update the 'classic' split and standard single coil configuration with noise-free low impedance designs. The wide frequency response gives you drive that supports the music, definition that helps you stand out.

The recessed input jack protects the vital connection between guitar and amp. Keeps the jack and cable out of sight for a sleek, modern look.

The BX headstock extends beyond the nut so your thumb can support first and second fret notes.

Controls

This switch electronically simulates the sound of a single coil pickup, for biting rhythm tones using the bridge pickup alone or in combination.

Dial in up to 10 dB of boost between 500 Hz and 1 kHz with the Mid-boost control.

Each of these mini-toggle switches has a different function. The first bypasses the entire system to put you in Direct Drive.

On 1203 and 1212 guitars, the middle switch adds a capacitor, so the tone stays the same as you turn down the volume for crisp rhythm chops.

On 1203 guitars, the third switch taps the coils of the single pickups for a brighter sound. On 1212 guitars, it splits the coils of the bridge

humbucker (the output matches the other two pickups in split coil mode).

Quick-reach Master Volume lets you control loudness without breaking the rhythm of your leads.

Five position switches expand the versatility of three-pickup systems.

The Tone Prism system creates advanced tonal possibilities from conventional high output pickups. Three-pickup guitars have a Master Volume with one Tone control for the neck and middle pickups, another for the bridge. Two-pickup instruments have a Master Volume, a separate Volume control for the neck pickup plus a master Tone.

Quick-reach Master Volume control for swells, pedal-steel effects.

Spectrum Drive controls include individual mini-toggle switches for each pickup, so you can select any combination. The Master Tone control works no matter which pickups you choose.

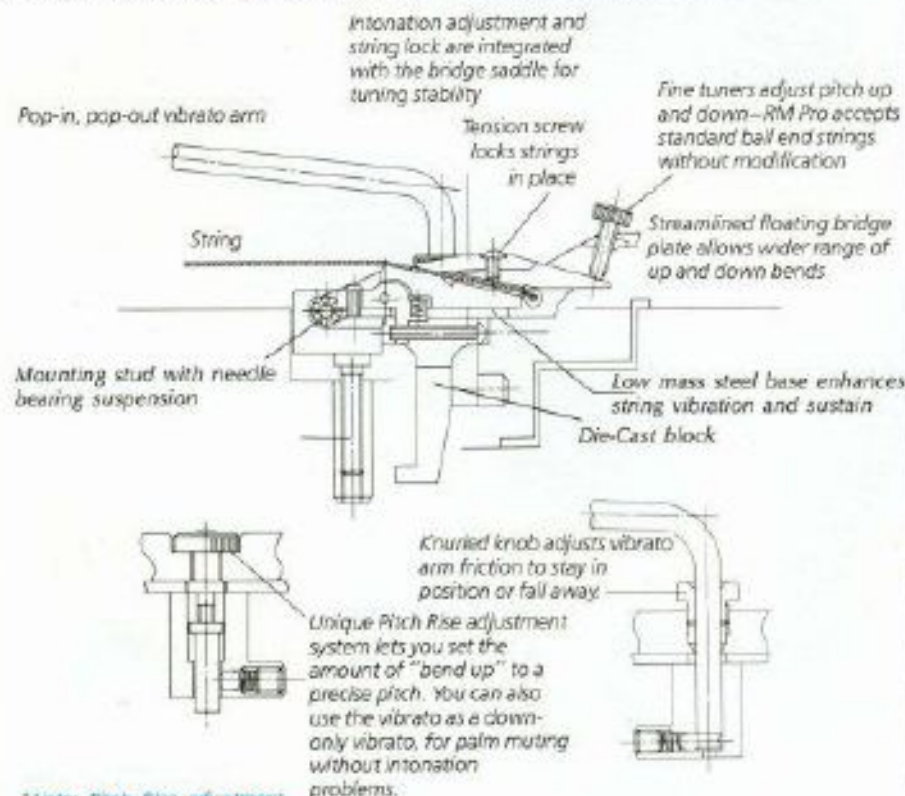

RBX and BB active electronics enhance the tone of our specially developed low impedance bass pickups with 8dB of boost or cut centered at 30 Hz (Peak) and 10dB of boost or 12dB of cut centered at 5 KHz (Peak).

Vibrato Systems

Because vibrato can be a dramatic creative tool, the advanced design RM Pro locking vibrato system is built for speed, comfort and

accuracy: faster string changing, precise intonation adjustment, ball bearing suspension and the versatility to bend up or down.

*Note: Pitch Rise adjustment not provided on left-handed models.

Hardware

The die-cast BX bridge has fine tuners for accurate pitch control. The quick-change string saddles accept any ball end strings.

Our locking nut mechanism is designed for speed, convenience and security. The height is adjustable at treble and bass ends. This unique Yamaha design gives you a low action at the bottom frets, plus rock-solid tuning stability.

You wouldn't let anyone else tune your guitar. We won't let anyone else make our tuners. Yamaha tuners are precision-engineered for the utmost in accuracy, stability and durability. Nothing less would be good enough for us. Or for you.

RBX

RBX Series

To put modern music in motion, you need streamlined comfort, effortless balance, penetrating tone.

A light, naturally balanced body with deep contoured cutaways. A massive die-cast bridge for sustain and punch. "Access Angle" bolt-on construction to let you use the full range. Maple neck and rosewood fingerboard for a crisp sound with depth and power. A classic pickup combination updated with a hum-bucking split single coil and a standard single coil pickup.

That's RBX: Rock solid, instantly responsive, designed to make the bass a total extension of your musical personality.

RBX Active

Active electronics with two bands of boost or cut equalization.

Shape your sound for extreme power, pop-out presence, or the perfect balance of driving fundamentals and delicate overtones.

Active pickups in a time-tested configuration give you the right raw material to work with—a solid sound with strong character.

BB Series

Warmth and presence. Tonal shading. Fluid expression. Consistent response. Bodies and necks contoured for comfort, with deep cutaways for upper octave playing. Low-mass bridges and classic pickup configurations let the radiant warmth of select woods shine through every note.

The classic expression of bass performance.

BB Active

How do you improve a classic? You give it active electronics with wide-ranging, noise-free pickups that bring out a rich tonal spectrum with driving presence. Plus two bands of equalization to shape the sound to your music.

Now more than ever, BB basses are the standard of comparison.

BX Series

Headless designs refined for comfort and playability.

The neck extends past the nut for thumb support when fingering low notes. This string lock and fine tuning bridge work with any ball-end strings you choose. The five-ply maple/mahogany neck extends through the sculptured body. The ebony fingerboard has a crisp, even response over all 24 frets. High output humbuckers give you a powerfully centered sound to drive the music.
